

TRAFFIC CONTROL SERVICES

CT can provide temporary traffic control through flagging operations to ensure the safety and traffic flow through road construction sites. CT applies its experience and best practices to adapt to every jobsite, and they train every member of their traffic control team to anticipate traffic movements.

Thanks to CT's safety-driven culture, they think about safety at all times, ensuring safe passage for the general public and safe working conditions for road construction crews and their own flaggers and workers. We'll consider factors such as:

- Time, date and frequency of work
- Types of traffic
- Legal requirements and practices

Standard Flagging Operations include lane restrictions and temporary closures. These operations often include high volumes of traffic and require careful communication between traffic control flaggers and construction laborers or rig movement personnel doing their jobs. Our flaggers are trained to alternate vehicle movement and avoid traffic building up in any one direction, while also giving construction or rig moving crews the time they need to complete their required work.

Contractor Transport, LLC (CT) is a fluids and environmental solutions provider offering customized services to the water, stimulation, fracturing, fluids, and production needs of our customers throughout the U.S. CT's Pennsylvania & West Virginia based local teams consist of professional and field service resources throughout the Marcellus & Utica Shale regions. CT employs more than 350 local personnel ranging from CDL drivers, environmental technicians, equipment operators, safety personnel, heavy equipment operators, and laborers throughout Eastern US.

Safety

CT is committed to providing our clients with the safest most dependable solutions. Our local footprint and young fleet specialized for the energy industry coupled with our customer centric employees enables us to provide true 24/7 customer service. At CT, we believe that every accident, and therefore every injury, is preventable, and we embed that philosophy into every CT effort through a combination of technical field procedures and ongoing training programs. Every employee has stop-work authority—if it's not safe, don't do it. The result is exceptional safety performance, even in hazardous work environments, severe weather, and remote locations. All CT employees are put through a rigorous onboarding training program that consists of classroom training as well as on the job training.
